                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to
                                                                                                                                                                                                                                                                                                                                                                                                                                       The partial amino acid sequences of both chains of the Cytolysis Inhibitor were known. This probe is one of two which were prepared based on the N-terminal sequences of the inhibitor. It corresponds to the sequence DNELGENSNGG. Both probes were radioactively labelled and used screen a liver-specific cDNA library. One clone which hybridised positively to both probes was found to contain a 1.7kb BamHI-KpnI fragment. This was inserted into plasmid pGEM4, to give DSM 5269, and sequenced. See also AAQ11502 and AAQ11503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                 DNA sequence coding for cytolysis inhibitor - is strong inhibitor of terminal complement protein, e.g. perforin secreted by killer cells.
                                                                                                                                                                                                                      Probe based on amino acids 6-15 of the Cytolysis Inhibitor A-chain.
                                                                                                                                                                                                                                    cytolysis inhibitor; perforin; immunological effector molecule;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to producing a sub-population of labeled nucleic acids (NAB) comprising contacting a NA sample from a physiological conditions to enzymatically generate sub-population of NAB, where each conditions to enzymatically generate sub-population of NAB, where each cach labeled NA is generated using a single gene specific primer. The each labeled NA is generated using a single gene specific primer. The comparison of labeled NAB sub-population of labeled NAB which is useful for analysing the differences in the RNA profiles between several different physiological sources, where the method comprises producing cubpopulation of labeled NAB for the different physiological sources, comprising the populations for each physiological sources, comprising the population, where the comparison is preferably difference by physiological sources to an array of probe NAB stably associated with the surface of a substrate to produce a hybridisation pattern for each of the comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, or different is the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where comparing the patterns for each of the sources, where the sequence data for this patent did not form part of the printed comparing the pattern is a formal part of the patint of the pattern of the patint of the pattern of the patint of the pattern of the patint of the patin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Producing sub-population of labeled nucleic acids, useful for analyzing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The invention relate to a method of diagnosing (M1) non-blood disease

such as solid tumor by providing peripheral blood sample of human having

con-blood disease, and comparing an expression profile of specific genes

in the peripheral blood sample to reference expression profile of the

constant of the genes is differentially expressed in peripheral

blood mononuclear cells (PBMCs) of patients having the disease as

compared to PBMCs of normal humans. The method is useful for diagnosing

conpared to PBMCs of normal humans. The solid tumor is chosen from

compared to PBMCs of normal humans. The solid tumor is chosen from

compared to PBMCs of normal humans. The solid tumor is chosen from

compared to DBMCs of normal humans. The solid tumor is chosen from

consideral blood sample comparises enriched PBMCs. The peripheral blood

considerated at differentially expressed in peripheral blood samples

considered at different stages of progression, development or treatment of

condocted by the method

confidence agene that is differentially expressed and detected by the method

contains the nivention.
